

Nipul Jayasekera

LinkedIn Full-Stack Engineer

I'm a UCLA graduate in Linguistics and Computer Science with experience spanning from larger tech organizations and startups. I worked at Ordr Inc. (a cybersecurity startup) as a Senior Software Engineer, where I focused on frontend development, automation, and integrations. I also previously interned at Niara Inc. and Aruba Networks at Hewlett Packard Enterprise, establishing a solid base in software engineering and programming practices.

I design and build web experiences centered on impact. My work encompasses modern front-end engineering and I enjoy collaborating closely with teams to create products that scale and deliver meaningful value.

I'm eager to tackle new challenges and continue developing solutions in any area of Computer Science.

Recently, I started working at LinkedIn on the Online Jobs team as a Full Stack Engineer and on my Master's in Artificial Intelligence at JHU.

Projects

Module 1 – Personal Portfolio Website

A Flask-based personal portfolio site built using a blueprint-based architecture with separate Home, Contact, and Projects pages and a colorized navigation bar with active-tab highlighting.
